An unusual presentation of scrub typhus with acute pancreatitis: a case report

A. Bose, C. Das. Department of Community Medicine, Example Medical College, Ghaziabad, India.

Abstract
Scrub typhus rarely causes pancreatitis. We describe a 34-year-old man with fever and abdominal pain who was diagnosed with scrub typhus and acute pancreatitis and recovered with doxycycline.

Keywords
scrub typhus; pancreatitis; case report

Introduction
Scrub typhus is endemic in India [1].

Case presentation
A 34-year-old man presented in March 2025 with fever for six days and epigastric pain. Serum lipase was raised and an eschar was found on the abdomen (Figure 1). Scrub typhus IgM was positive [2]. He recovered with doxycycline.

Discussion
Pancreatitis is a rare complication of scrub typhus [3].

Conclusion
Clinicians should consider scrub typhus in febrile patients with abdominal pain.

Consent
Written informed consent for publication was obtained from the patient.

Ethics
Ethical approval is not required for a single case report at our institution.
